Silicon Photomultipliers (SiPM), Low-Noise, Blue-Sensitive

C-Series SiPM Sensors

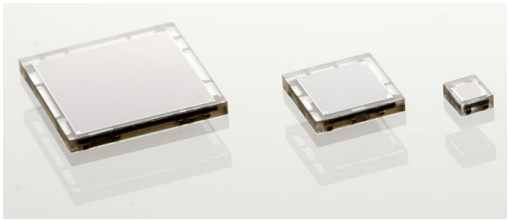

Figure 1. C−Series Sensors

ORDERING INFORMATION

See detailed ordering and shipping information on page 14 of this data sheet.

The C−Series low-light sensors from **onsemi** feature an industry-leading low dark-count rate combined with a high PDE. For ultrafast timing applications, C−Series sensors have a fast output that can have a rise time of 300 ps and a pulse width of 600 ps. The C−Series is available in different sensor sizes (1 mm, 3 mm and 6 mm) and packaged in a 4-side tileable surface mount (SMT) package that is compatible with industry standard, lead-free, reflow soldering processes.

The C−Series Silicon Photomultipliers (SiPM) form a range of high gain, single-photon sensitive, UV-to-visible light sensors. They have performance characteristics similar to a conventional PMT, while benefiting from the practical advantages of solid-state technology: low operating voltage, excellent temperature stability, robustness, compactness, output uniformity, and low cost. For advice on the usage of these sensors please refer to the Biasing and Readout Application Note.

Table 1. PERFORMANCE PARAMETERS

Sensor Size	Microcell Size	Parameter (Note 1)	Overvoltage	Min.	Typ.	Max.	Units
1 mm	10μ, 20μ, 35μ	Breakdown Voltage (Vbr) (Note 3)		24.2		24.7	V
3 mm	20μ, 35μ, 50μ						
6 mm	35μ						
1 mm	10μ, 20μ, 35μ	Recommended overvoltage Range (Voltage above Vbr) (Note 2)		1.0		5.0	V
3 mm	20μ, 35μ, 50μ						
6 mm	35μ						
1 mm	10μ, 20μ, 35μ	Spectral Range (Note 4)		300		950	nm
3 mm	20μ, 35μ, 50μ						
6 mm	35μ						
1 mm	10μ, 20μ, 35μ	Peak Wavelength (λp)			420		nm
3 mm	20μ, 35μ, 50μ						
6 mm	35μ

	35μ				0.2		%
	50μ				0.6		%
6 mm	35μ				0.2		%

1. All measurements made at 2.5 V overvoltage and 21°C unless otherwise stated.
2. Please consult the maximum current levels on page 6 when selecting the overvoltage to apply.
3. The breakdown voltage (Vbr) is defined as the value of the voltage intercept of a straight line fit to a plot of $\sqrt{I}$ vs V, where I is the current and V is the bias voltage.
4. The range where PDE > 1% at Vbr + 5.0 V.
5. Note that the PDE does not contain contributions from afterpulsing or crosstalk.
6. Dark current derived from dark count data as $DC \times M \times q \times (1 + CT)$, where DC is dark count, M is gain, q is the charge of an electron, and CT is cross talk.
7. Measured as time to go from 10% to 90% of the peak amplitude.
8. RC charging time constant of the microcell (τ)
9. Internal capacitance of the sensor. Typically add 2−3 pF for sensor in package. Listed by unique microcell size for each part version.
10. Quoted as the percentage change per degree C from the measured value at 21°C.

CIRCUIT SCHEMATICS

An SiPM is formed of a large number (hundreds or thousands) of microcells. Each microcell is an avalanche photodiode with its own quench resistor and a capacitively coupled fast output. These microcells are arranged in a close-packed array with all of the like terminals (e.g. all of the anodes) summed together. The array of microcells can thus be considered as a single photodiode sensor with three terminals: anode, cathode and fast output.

Simplified circuit schematic of the SensL® SiPM showing only a 12 microcell example. Typically, SiPM sensors have hundreds or thousands of microcells.

Circuit schematic of the SensL SiPM microcell, showing details of the Fast Output.

EVALUATION BOARD OPTIONS

SMA Biasing Board (MicroFC−SMA−XXXXX)

The MicroFC−SMA is a printed circuit board (PCB) that can facilitate the evaluation of the C−Series SMT sensors. The board has three female SMA connectors for connecting the bias voltage, the standard output from the anode and the fast output signal. The output signals can be connected directly to a 50 Ω-terminated oscilloscope for viewing. The biasing and output signal tracks are laid out in such a way as to preserve the fast timing characteristics of the sensor.

The MicroFC−SMA is recommended for users who require a plug-and-play set-up to quickly evaluate C−Series SMT sensors with optimum timing performance. The board also allows the standard output from the anode-cathode readout to be observed at the same time as the fast output. The outputs can be connected directly to the oscilloscope or measurement device, but external preamplification may be required to boost the signal. The table below lists the SMA board connections. The SMA board electrical schematics are available to download in AND9809/D.

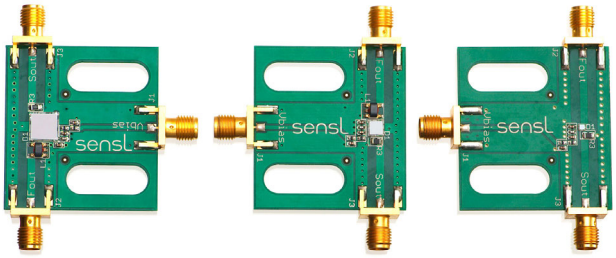

Figure 9. SMA Biasing Board

MicroFC−SMA−XXXXX	
Output	**Function**
Vbias	Positive bias input (cathode)
Fout	Fast output
Sout	Standard output (anode)

Pin Adapter (MicroFC−SMTPA−XXXXX)

The SMT Pin Adapter board (SMTPA) is a small PCB board that houses the SMT sensor and has through-hole pins to allow for use with standard sockets or probe clips. This product is useful for those needing a quick way to evaluate the C−Series SMT sensors without the need for specialist surface-mount soldering. While this is a ‘quick fix’ suitable for many evaluations, it should be noted that the timing performance from this board will not be optimized and if the best possible timing performance is required, the MicroFC−SMA−XXXXX is recommended. The pin-out information is shown in the table below. The SMTPA board electrical schematics are shown in Figure 12 and are available to download in AND9809/D.

Pin Assignments	
Pin #	MicroFC−60035−SMT
1	Anode
2	Fast Output
3	Cathode
4, 5	No Connect*

*The ‘No Connect’ pin 4 should be soldered to the PCB. This pin can be connected to ground but it can also be left floating without affecting the dark noise. It is recommended that the Pin 5 paddle is NOT soldered to the PCB and is left floating to achieve optimal soldering on pins 1 to 4. Please note the full advice in the CAD file.

MICROFC−SMA−60035−GEVB			SMT sensor mounted onto a PCB with SMA connectors for bias and output.	PK
MICROFC−SMTPA−60035−GEVB			SMT sensor mounted onto a pin adapter board	PK

11. All Devices are Pb-Free and are RoHS Compliant.
12. The two-letter delivery option code should be appended to the order number, e.g.) to receive MICROFC−60035−SMT on tape and reel, use MICROFC−60035−SMT−TR. The codes are as follows:
    PK = ESD Package
    TR1 = Tape
    TR = Tape and Reel

    There is a minimum order quantity (MOQ) of 3000 for the tape and reel (TR) option. The TR option is only available in multiples of the MOQ.
